Measuring Up: Evaluating an online resource for palliative care

Jennifer Tieman,
Director, CareSearch Project

CareSearch is funded by the Australian Department of Health and Ageing under the National Palliative Care Program

AHOC Conference 2008
About CareSearch

• Existing website at www.caresearch.com.au
  – Quality information about palliative care
  – Literature database of “hard to find” content

• Development of a new online resource
  – Incorporate the existing content and functions
  – New resources and content
Purposes of evaluation

• Determine if work is progressing appropriately
• Identify how and where things could be improved
• Inform the development of applications or processes and the quality of product/service
• Assess the effects or impacts on users and or processes
Issues in ICT and web evaluations

- Ubiquitous nature of online
- Delivery vs. development vs. implementation
- Website and IT applications: similar but not the same
- Costly, often “no going back”
Evaluation issues specific to CareSearch

- Existing website and new web resource
- Multiple audiences
- Different components and functionalities
- Direct measures and indirect effects
Developing evaluation plan

• Clarifying purposes and uses
  – Ongoing and iterative improvements
  – Integrated part of activities

• Framework = Manage evaluation activities and have an immediate and a cumulative meaning

• Evaluation processes
  – Process evaluation
  – Formative
  – Summative (Impact and outcomes)
  – Evaluation partner (CHSD)

• Identifying components and activities
<table>
<thead>
<tr>
<th>Evaluation Focus</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Access</td>
<td>Create CSpckn; Ensure best possible site and functions</td>
</tr>
<tr>
<td>Use</td>
<td>CSpckn is used; Awareness, relevance, users</td>
</tr>
<tr>
<td>Usefulness</td>
<td>CSpckn makes a difference; Practice impacts; patient and carer knowledge</td>
</tr>
<tr>
<td>Process</td>
<td>CSpckn project is well managed; Processes and checkpoints meet specified objectives</td>
</tr>
</tbody>
</table>
Evaluation Focus: Access

- End user needs and benefits
- User testing exercises
- Search term analysis
- ICT Attitudes and competence
- Design standards
Evaluation Focus: Use

- Web Metrics
- Logs and databases
- Registrations
- Component studies (eg GP pages)
- Feedback surveys
Evaluation Focus: Usefulness

- Existing data sources
- Feedback surveys
- Focus groups
- Impact research study
- Component Impact (eg RDMS)
Evaluation Focus: Process

- Accountability
- Internal processes
- Project standards
- Communication
- Participation
- Evaluation partner: CHSD
Evaluation Studies/Activities to Date

- Main focus: access and use. Use relates to the current website.
- Set up of logs, databases etc
- Various studies have been completed
User Testing: Formative, access focus

1. Consumer study:
   - Menu terms confusing
   - Replace with user friendly words

2. Clinician study:
   - Relationship between menu and submenu not clear
   - Graphic modifications
Feedback Surveys

1. Online survey:
   - Very high visitor satisfaction
   - Great diversity of needs

2. Specialist services
   - Many clinicians haven’t heard of CareSearch
   - Barriers to access (state and service)
Web Metrics

1. Usage statistics
   - 20,000 visits per month
   - 200,000 - 400,000 hits per month

2. Page data

3. Referring sites
Web Logs and datasets

1. Requests

2. Registrations\(^1\)
   - Site: 270
   - RDMS
     - Active: 65
     - Total: 140
   - Newsletter:
     - eNews: 710
     - Project Update: 876

\(^1\) As at March 2008
So what do we do with the information?

- Immediate applications
- Reporting and accountability
- Culture of review, improvement and measurement
- Understand users, needs, processes and mechanisms
Key Messages about evaluation

1. Identify what you want to achieve with evaluation

2. Look at existing data. If you can, use data and measures that are part of what you do.

3. Use evaluation as part of management and development cycle

4. Build in evaluation from start. Don’t leave it till the end

5. Ongoing evaluation reduces the stress of “hoping for the best”.

Acknowledgements

CareSearch would like to thank the many people who contribute their time and expertise to the project including members of the National Advisory Group and the Knowledge Network Management Group.

The CareSearch website and the Australian Knowledge Network in Palliative Care project are funded by the Australian Government Department of Health and Ageing as part of the National Palliative Care Program.
