

Why evidence matters in palliative care

An evidence-based approach uses the best available evidence to answer clinical and service-related questions. CareSearch is committed to providing access to the latest evidence in palliative care and provides the tools to help you find and use evidence for yourself.

When you visit www.caresearch.com.au/evidence you'll see six buttons:

Why is evidence important?

Evidence-based practice requires access to good quality and relevant evidence. Find out about knowledge translation and appraising and applying evidence.

Searching for Evidence

Develop skills that will allow you to search for evidence on your own. Learn about databases and resources, learning to search, using search filters, systematic searching, web searching, open access, and using specialist palliative care journals.

Using Evidence in Practice

Does your health service ensure that the care provided is consistent with the evidence for best practice? Find out about identifying change needs, how you can implement it, and how you can measure change.

PubMed Searches

Discover the power of PubMed searches, use the pre-built searches that CareSearch offers and learn how to build your own.

Search Grey Literature

Access six sets of palliative care information and evidence that can be hard to find. Frequently asked questions about Grey Literature, will help you learn about the contents of the database.

Systematic Review Collection

Access information about the latest reviews in palliative care.

CareSearch is always free to use and is available at www.caresearch.com.au. To navigate directly to the Finding Evidence section on your mobile, scan this code with a QR scanner.
