**Study Title:**
A two-stage trial of antiemetic therapy in patients with cancer and nausea not related to anticancer therapy.

Study 2: A randomised controlled double blind study of levomepromazine versus placebo with rescue antiemetics (best supportive care) in patients with refractory nausea.

**Brief description of the study:**
To assess the efficacy of parenteral levomepromazine and parenteral ondansetron versus placebo with BSC rescue in patients with cancer and nausea refractory to guideline driven targeted antiemetic therapy or single agent therapy with haloperidol.

**Study Methodology: (Please mark with an x which type of study methodology)**
