Standardised Educational Framework

☑ **Assess competency**
☑ **Deliver Standardised Education**

Principles of Symptom Management

1. How to manage symptoms
2. Commonly used medications for symptom control
3. Access to medications in the community
4. Co-ordinate scripts

Process of Injecting - 10 Step Plan

1. Hand washing
2. Assembling the necessary equipment safely
3. Preparing the needle and syringe
4. Opening an ampoule
5. Drawing up medication from ampoule
6. Giving an injection into a cannula
7. Checking cannula site
8. Recording medication(s) in the caregiver medication diary
9. Safely storing and disposing of medications
10. Contact details of nursing service.

Medication Classification	Examples
Narcotics	Fentanyl; Hydromorphone; Methadone; Morphine; Oxycodone
Tranquillisers	Clonazepam; Midazolam
Anticholinergic Agents	Glycopyrrolate; Hyoscine butylbromide; Hyoscine hydrobromide
Major Tranquillisers	Haloperidol
Antiemetics	Methotrimeprazine Hydrochloride; Metoclopramide
Induction Agent	Ketamine
All other classifications	Dexamethasone; Ketorolac; Normal saline

Reference: Adapted from Australian and New Zealand Standard – *User-applied labels for use on syringes containing drugs used during anaesthesia 2001*
